YUE SAMUEL LU

◇ Department of Astronomy and Astrophysics ◇ SERF 431 ◇ UC San Diego ◇ CA 92093
◇ ✉ yul232@ucsd.edu ◇ ☎ (+1) 805-895-2719 ◇ 🏠 y-samuel-lu.github.io

EDUCATION

• **University of California, San Diego (UCSD)** Sep. 2022—Present
Ph.D. in ***Physics*** with an ***astrophysics*** emphasis
Current GPA: 3.90/4.00

• **University of California, Santa Barbara (UCSB)** Sep. 2018—Jun. 2022
B.S. in ***Physics***; B.S. in ***Mathematics***; Minor in ***Astronomy***
Overall GPA: 3.82/4.00 (Physics GPA: 3.93, Math GPA: 3.92)
Consecutive Dean's Honors; Physics Department Honor; College of Letters and Sciences Graduation Honor

GENERAL RESEARCH INTERESTS

Theoretical and Computational Astrophysics
C/IGM, Large-scale Structures, Compact Object Accretion, Cosmic Rays, Numerical Simulations

RESEARCH EXPERIENCES

Graduate Student Researcher in FIRE Simulation Project July. 2022—Present
Prof. Dušan Kereš and FIRE collaboration *UCSD*

· Participated in the collaboration of Feedback in Realistic Environments (FIRE) simulation project
· Analyzed impacts of different transport models of cosmic rays (CR) on the evolution of galaxies and the properties of CGM
· Reran some of the low-res simulations with CR transport models whose validity has been tested

Intergalactic Filaments in Simulation Nov. 2020—Apr. 2023
Prof. Nir Mandelker, Prof. S. Peng Oh *UCSB, KITP*[1]*, HUJI*[2]

· Analyzed data from an enhanced resolution simulation adapting N-body + magnetohydrodynamics code (`AREPO`)
· Unveiled thermodynamical properties of the filaments by stacking filament slices and fitting them to isothermal models
· Studied the dynamics of the filaments by calculating different mass contributions using the modified summation method
· Studied the behaviour of the cold stream when penetrating the strong shock surrounding the halo and used it as a poster-child for further idealized simulations

AGN Accretion Disk Jul. 2020—Jun. 2022
Prof. Omer Blaes *UCSB*

· Disproved several hypotheses about the origin of the $m = 2$ nonaxisymmetric anomaly on an AGN disk from a simulation, including the Rossby wave instabilities, the vorticity evolution, and the spiral density wave
· Visualized the ring-like structure in 3D and studied more about its origin by calculating the angular momentum of the disk
· Proposed new MHD simulations with longer run time to figure out the destination of the ring

CONFERENCES

International Conference on Resolving Galaxy Ecosystems on All Scales Poster
Dec 2023

The Chinese University of Hong Kong

Santa Cruz Galaxy Workshop Invited talk (video)
Aug 2023

UC Santa Cruz

UCSB Undergraduate Physics Research Symposium Contributed talk (video)
Sep 2021

KITP, UCSB

TEACHING / GRADING EXPERIENCES

UCSD Physics Department Fall 2022—present
Teaching Assistant

Ran and instructed discussion sections and lab sections for undergraduate level physics courses; graded homework assignments and/or exams. Course have taught so far:

· **PHYS 1-series lab:** introductory lab course designed mainly for pre-med students

· **PHYS 2A:** mechanics (aimed for engineering students)

· **PHYS 2B:** electromagnetism (aimed for engineering students)

· **PHYS 7:** galaxies and cosmology (general education level)

· **PHYS 13:** life in the universe (general education level)

· **PHYS 163:** galaxies (designed for upper division physics students)

UCSB Campus Learning Assistance Services (CLAS) Fall 2020—Spring 2021
Math, Physics and Engineering Tutor

Taught lower division math and physics courses; ran group tutorials and drop-in sessions

UCSB Physics Department Fall 2019—Summer 2022
Learning Assistant and Grader

Assisted teaching assistants on running physics course discussion sessions; graded assignments and/or exams

SELECTED COURSEWORKS

Graduate Courses: High Energy Astrophysics, Galactic Dynamics, Interstellar Medium, Stellar Physics, Astrophysical Fluid Dynamics, Parallel Computing, Emergent States of Matter, Statistics, Data Analysis and Machine Learning for Physicists
Independent Studies: Differential Geometry and Manifold Theory with Applications in General Relativity (with Dr. Jiayin Pan at UCSB)

SKILLS

Programming Languages	Python, C/C++, Matlab, Mathematica
Scientific Computation	Numpy, SciPy, matplotlib, Numba, astropy
Numerical Simulation Suites	`AREPO`, `GIZMO`, `Athena/Athena++`
Operating Systems	Linux, MacOS
Parallel Computing	OpenMP, MPI, CUDA
Typesetting	LaTeX, Markdown
